PCH PRODUCT DATA — TYPE PCH 1026

DIGITAL WINDTURBINE STRUCTURAL VIBRATION MONITOR

USES

• Permanent monitoring of low frequency structural and seismic vibrations

APPLICATIONS

- Wind turbines
 - Tower vibrations
 - Drive Train oscillations (pitch turbines)
 - Edgewise blade vibrations (stall turbines)
- Steel towers
- Chimneys
- Bridges
 - Buildings
 - Seismic vibrations according to ISO4866

CONFIGURATION & SETUP

- Setup and configuration can be performed via seriel RS-232 port using the supplied setup and monitoring PC program CHT 1012. All settings can be changed on site.
- Setup and Display can also be performed remote through optional RS-485 connection from external PC or controller, e.g. WTC or Process controller
- A log in the PC software keeps record of the settings in the particular monitor, identified by instrument serial no.

FEATURES

- 3 internal vibration sensors (accelerometers)
- Triaxial measurements in A, B and C directions
- OmniDirectional Tower Monitoring
 Proven optimal monitoring of towers
- Facilitates monitoring of up to 4 different frequencies indpendently, either one from each sensor or up to 4 different frequencies from one sensor
- Proven filter techniques, based on experience with windturbine applications
- Measures RMS, Max. Peak or Peak-Peak values
- 1 4 independent industrial standard 4-20mA outputs
- 4 independent Alarm relays with programmable make/break function and 1 System Failure relay
- Programmable Alarm thresholds and Delay times independently for each Alarm Relay
- Internal constant watchdog of both sensors and electronic circuits. Failures are indicated on the failsafe System Failure relay
- Test function for all sensors and electronic circuits.
- Designed for rough environments, both regarding temperature, electric noise interference and humidity.
- Possibility of implementation of customer defined monitoring algorithms, alowing customers to differ from their competitors.

SPECIFICATIONS PCH 1026

CONFIGURATION

PCH 1026 is a selfcontained monitor in a sealed, rugged box. To function only a DC power supply and desired output connections are required. PCH 1026 is designed for low frequency monitoring applications. Built in vibration sensors in 3 directions: X, Y and Z.

Including test functions for all sensors and electronic circuits as well as internal watchdog for continously self-monitoring functions. The design of PCH 1026 is based on a digital platform allowing multiple customer solutions, and easy rapid change of configuration and settings, also in the field.

DC POWER SUPPLY

Voltage range	20-30V
Max power consumption	7W

DIMENSIONS

Length (without cables)	265 mm
Width	130 mm
Height	66 mm
Weight	app. 2 kg
4 Mounting Slots:	
Slot width	6,5 mm
Hole pattern	117,5 x 200 mm

ACCELEROMETERS (SENSORS)

3 internal acc. in directions A, B and C

.....Optionally 4 external accelerometers All internal accelerometers measures statically Noise Density......500µg/SQRT(Hz) All internal accelerometers have built in Selftest function, by an electrostatic force applied to the sensing element.

SIGNAL CONDITIONING

All signal conditioning is performed digitally. This means that settings and configurations can be changed and verified by the supplied PC software program (CHT1012). The Digital Signal Processing is performed by State-of-the-art DSP technology ensuring precise and valid monitoring. Selective monitoring of interesting frequencies or frequency bands can be obtained by choosing among the wide range of High Pass and Low Pass filters. Simply choose from which frequency to what frequency your monitoring should be performed at. The PCH 1026 holds a wide range of filters, which have been proven by years of experience in the industry.

The filter range includes: High & Low Pass filters

SIGNAL DETECTION

PCH 1026 offers both RMS, Peak and Peak-Peak detectors to be chosen in the supplied setup PC software, thereby offering the well known signal types based on many years of experience in the vibration monitoring industry. **True RMS:**

Averaging time......0,01 - 100 sec. Resolution.....0,01 sec. Peak or Peak-Peak: Attack time.....1 - 1000 msec. Decay time.....0,1 - 100 sec. Resolution.....0,1 sec.

MEASURING PARAMETER

PCH 1026 offers measurements to be made either in acceleration, velocity or displacement values, even though the internal sensors are accelerometer types.

Optional:

Velocity......m/s, mm/s, μ m/s, Inch/s, mInch/s, μ Inch/s

Displacement...m, mm, µm, Inch, Mils, µInch

ALARM & SYSTEM FAIL. RELAYS Alarm Relays:

PCH 1026 offers 4 independent Alarm relays with programmable Make or Break functions. All 4 relays can be assigned to the desired frequency or measuring direction. E.g. either one relay pr. frequency of interest or up to 4 different frequencies on the same relay. Alarm threshold level, delay time and latch or nonlatch function can be setup independently for each relay using the supplied PC software. **System Failure Relay:**

PCH 1026 offers a System Failure relay with Break function for optimal fail-safe configuration. Failures inside the PCH 1026, detected by the internal watchdog, either in Test mode or in Monitoring mode, will cause the System Failure relay to trigger. The System Failure relay reacts to: Power Failure, Overloads, Processor halted, Defective sensors.

For all 5 relays:

DC OUTPUTS

RS-232 INTERFACE

Serial two wire asynchron interface complies with IEA-232 standard. **Connector on monitor**......9 pin SUB-D male **Cable type**

.....Lap-Link or Null modem 9 pin female

RS-485 INTERFACE

Serial two wire asynchron interface complies with IEA-485 standard. Half duplex. **Connector on monitor**...9 pin SUB-D female **Cable type**....120 ohm Screened twisted pair. 120 ohm termination resistor can be selected by shorting two pins in the SUB-D connector, during installation.

BUS COMMUNICATION Standard:

Modbus RTU both on RS-232 and RS-485 **Optional: (OEM customer solutions)** E.g. CANopen, InterBUS, ProfiBUS, DeviceNET, etc.

ACCESSORIES INCLUDED

Setup & Configuration PC software...... Type CHT 1012* * Runs on Windows 9x, and NT

User manual.

STANDARD COMPLIANCE

CE mark indicates compliance with EMC directive and Low Voltage Directive. **Safety:**

EN61010-1 (1993) and IEC 1010-1 (1991): Safety requirements for electrical equipment for measurement, control and laboratory use. **EMC Emission:**

EN50081-1 (1992): Generic emission standard part 1: Residential, commercial and light industry.

CISPR22 (1993): Limits and methods of Radio disturbance characteristic of information technology equipment. Class B limits. FCC class B limits.

EMC Immunity:

EN50082-2 (1995): Generic immunity standard part 2. Industrial environment (1995). Temperature:

IEC68-2-1 & IEC68-2-2: Environmental testing. Cold and dry heat.

Operating temperature.....-20°C to +50°C Storage temperature....-35°C to +70°C Humidity:

IEC68-2-3, Operating:.....95 % RH(40°C) IEC68-2-3, Storage......90-95 % RH(40°C)

Mechanical: Non operating:

IEC68-2-6, Vibration:.0,3mm,20m/s ² ,10-500Hz
IEC68-2-27, Shock:750 m/s ²
IEC68-2-29, Bump:1000 bumps at 250 m/s ²
Enclosure:
IEC5229: Protection provided by enclosure

IEC5229: Protection provided by enclosure IP54.

PCH Engineering A/S reserves the right to change all specifications and accessories listed in this Product Data sheet without notice.
